4423 Final Writeup

1. Can I show off your submission to future sections of the course?

Yes!

2. Provide a link to a gameplay video of your project. Record a few minutes and show me everything your game has to offer.

<https://www.youtube.com/watch?v=olQsyvQbiV4>

Probably doesn't need to be said, but there are some obvious cuts I made in the video to trim it down.

3. Provide a link to where I can download your project (source code). If you uploaded to canvas as a zip file just mention that here.

<https://github.com/Spades96/Exodus/tree/main>

As stated in the readme, the source code is in the code folder.

I have some extra folders with my assets, my updated design document, and a launcher for the game.

As you're probably well aware, cloning the repo and clicking on the launcher should work, you'll get a defender popup.

Run it anyway, I promise it's not a virus.

Although you're only asking for the source code, I really wanted to have the full project uploaded. But I would need to learn a new workflow for the github tool that lets you upload files over 100mb.

4. What is the name of your game?

Exodus

5. How is the game played? What are the controls?

WASD (only a and d are used) to move left and right

Space to jump

Shift to dash

The arm cannon can be freely aimed with the mouse in 360°, left click to fire
Right click to use sabre
Esc to pause, esc to unpause

You can walljump by jumping towards a wall and sticking to it, and pressing jump again to detach and gain some height, and repeat.

Note that the sabre will slash in the direction you're facing. This can feel awkward when you're aiming with the mouse away from the direction Aegis is facing, but the intention is for the arm cannon to feel dynamic, and the sabre to feel static. Furthermore, elevators/platforms are very sticky. Once they reach the end of their path you can jump off them, but while you're on a moving platform you'll be stuck in place.

Each level has platforming sections, a miniboss, and a boss. The goal in each level is to defeat the boss, and you beat the game by defeating the final boss.

6. Write a brief summary of what you created (3-5 sentences)

I made an action platformer inspired by Megaman X and Megaman Zero. The player has an arm cannon that can be freely aimed with the mouse in 360°, and a sabre. The game takes place on a human colony ship where you fight rogue androids and robots. There are three levels, each containing platforming sections, a miniboss, and a boss, along with an additional final boss stage.

7. List out any assets you used from the internet including code, models, audio, or other assets. List each asset along with a link to where you got it from. You do not need to list assets from class.

I used Lexend as the UI font

<https://fonts.google.com/specimen/Lexend?preview.script=Latn>

Most music tracks are from megaman x gamerips as listed below, and sfx are from freesound.org.

Music:

Intro cutscene and level 1 theme

8. Are there any requirements you did not complete from the requirements section?

No, I was able to complete them all.

9. How many total points did you complete from the bounties section?

I earned roughly 33 points. I'm using my numbered list of bounties from the next section of this writeup, section 10, for the breakdown below.

Objective (features graded on function): 28 points
1-10, 13, 14

14. Include additional varieties of AI with unique behaviors (2 points each, maximum 3 extra AIs) 2 extra ais, 4 points

There's two extra AIs, 2 points each for 4 points. The grunt enemy has the basic ai credited by 13 (include any form of ai). The minibosses and bosses are one extra variety of ai (they behave the same way), and the final boss is the second variety.

Subjective (features graded by implementation): 5 points
11, 12, 15

11. Include a tutorial sequence teaching the player how to play your game. (up to 5 points)

The first level shows keyboard and mouse controls for each action in the background. I would estimate this as two points.

12. Include different items that the player can equip and use. (Up to 6 points)

There's one key item pickup, you pick up your sabre in the first level and unlock it for the rest of the game. I would estimate this as two points.

15. Include a cutscene. (up to 5 points)

Very barebones here, just text. I would estimate this as one point. There are quite a few of them though!

10. Please list out each bounty you completed along with individual point value.

1. Include at least 3 separate areas / maps / zones the player can visit. **(2 points)**

2. Make use of moving terrain in your scene, such as elevators, moving platforms. **(3 points)**
3. Make use of interactable objects in your scene that change state based on player interaction, such as doors, levers, or buttons. **(3 points)**
4. Include environmental hazards **(2 points)**
5. Include checkpoints that the player returns to on failure. **(2 points)**
6. Change default Unity text and texture options for your UI elements. **(2 points)**
7. Add a custom image for the mouse cursor **(1 point)**
8. Allow the user to launch projectiles of some sort **(2 points)**
9. Provide difficulty options to the player. **(3 points)**
10. Allow the user to pause the game **(2 points)**
11. Include a tutorial sequence teaching the player how to play your game. **(up to 5 points)**
12. Include different items that the player can equip and use. **(Up to 6 points)**
13. Include any form of AI, even simple with predefined behavior. **(2 points)**
14. Include additional varieties of AI with unique behaviors **(2 points each, maximum 3 extra AIs) 2 extra ais, 4 points**
15. Include a cutscene. **(up to 5 points)**
